

Clean bones. Colorful parts.

nol.satu is a builder for makers: every site and page people make is assembled from the same small blocks. This system keeps the frame quiet and precise, so the blocks, and the people arranging them, get the colour.

```
/* Tailwind v4, inside the nol.satu monorepo */  
@import "@nolsatu/design-system/tailwind.css";
```

What changed from v1.2

v1.2 set the personality. v2 makes it sharper, fills the gaps a real product needs, and ships as code.

AREA

Frame

~~Ink + cream, light only~~

Stone neutrals, a cleaner descendant of cream. Light and dark are equal.

Brand colour

~~Six equal accents~~

Teal forest leads every action. Berry supports it and lives in the mark.

Categories

~~Pastel/saturated pairs; lime, gold and pink unreadable as text~~

Six hues matched in OKLCH. Structure moves to cobalt, Warmth to orchid. All pass AA.

Mark

~~Filled capsules, 3 PNGs~~

Monoline redraw on a 56-unit grid, 29 SVG files including lockups, favicon and app icons.

Type

~~Space Grotesk + Inter + JetBrains Mono~~

Space Grotesk + Instrument Sans + IBM Plex Mono, with a fluid scale.

Radius

~~8 · 14 · 22~~

4 · 6 · 12 · 18 · 24 · full, each assigned to a job.

New

~~None~~

Status colours, elevation, motion, focus, z-index, control sizes, contrast report.

Delivery

PDF

tokens.json → CSS variables + Tailwind v4, DESIGN.md, this site, PDF.

Built by two people, for people building things.

Two people, one studio table.

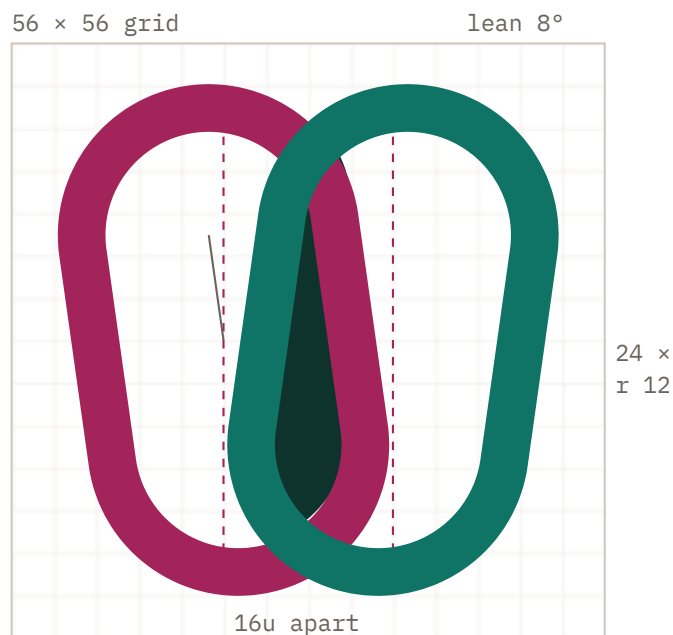

nol.satu started the way a lot of small businesses do, with two founders, one laptop and more ideas than time. Mutia took the parts that needed patience. Alshaadiq took the parts that needed nerve.

Every feature still has to pass the day-one test. Would this have made things easier for two people just starting out?

Founded by	Mutia & Alshaadiq
Started as	A tool for their own studio
First customer	Each other
Now building for	Anyone starting out

The mark: two forms, one overlap

Two capsules lean toward each other like two people mid-conversation. Where they cross, a third shape appears. That shape is the company, and it only exists because both showed up. In v2 the forms are drawn as lines, so the overlap is the only solid part of the mark.

Left form • berry

The first founder. Leans right, toward the other.

Right form • teal

The second founder, and the colour that leads the product.

The overlap

The only filled shape. Deep teal on light backgrounds, near-white on dark, so it always reads as the brightest or darkest thing in the mark.

Soft, rounded ends

Capsules instead of hard geometry: approachable over corporate.

Small sizes

At 24px and below, use `mark-small`. It has a 6-unit stroke so the lines survive a favicon.

Logo files

Every file is an outlined SVG, so it needs no fonts. Each lockup comes in five colourways: colour (`-`), `-dark`, `-mono` (currentColor), `-ink` and `-white`. On the live site, the file names link straight to the SVGs.

Horizontal lockup-horizontal

Horizontal · dark lockup-horizontal-dark

Stacked lockup-stacked

Stacked · dark lockup-stacked-dark

Mark mark

Mark · dark mark-dark

Mark · white mark-white

Horizontal · white lockup-horizontal-white

Mark · ink mark-ink

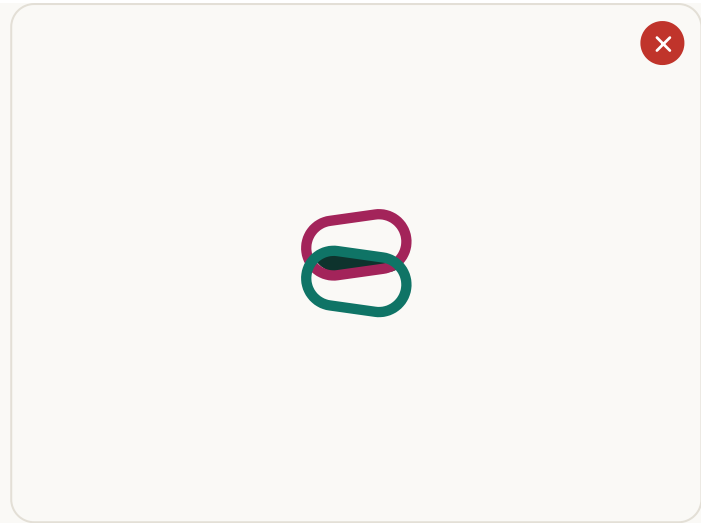

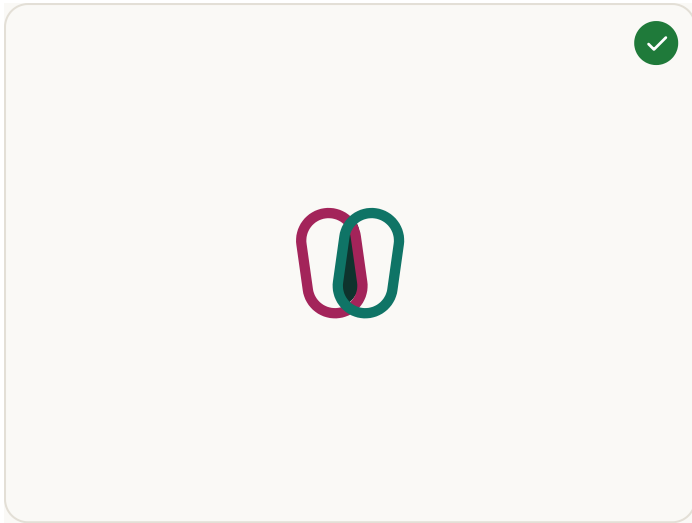

Wordmark wordmark

App icon app-icon

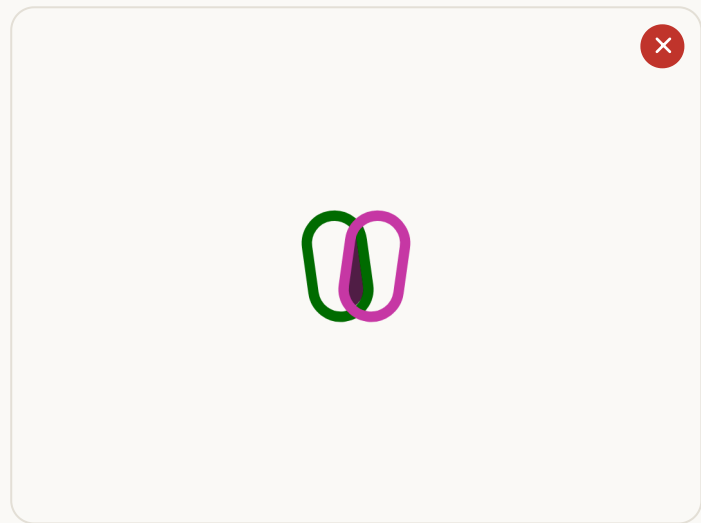

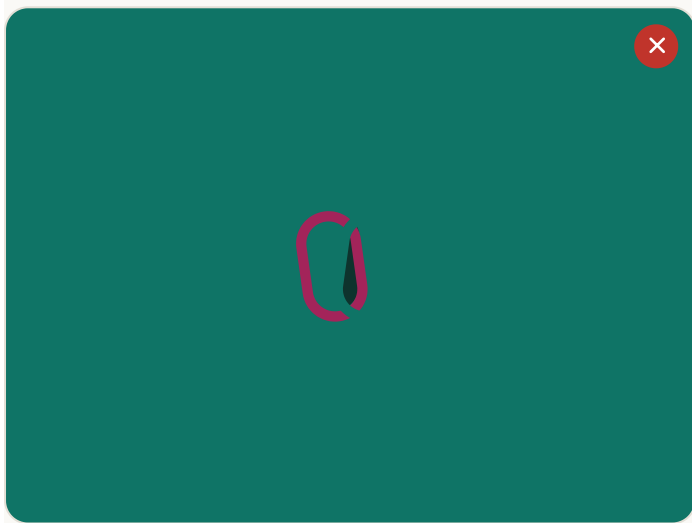

Small ($\leq 24\text{px}$) mark-small

Clear space. Keep half the mark's width free on every side of a lockup.

Don't rotate or straighten the forms. The lean is the idea.

Don't put the colour mark on teal. Use `-white` on brand fills and photos.

Don't recolour the forms. It's berry and teal, or one colour.

Minimum sizes: mark 16px (use `mark-small` up to 24px); horizontal lockup 88px wide. Always write the name in lowercase with its dot: **nol.satu**, even at the start of a sentence.

A quiet stone frame, one teal voice.

Neutrals do the structural work. Teal marks everything you can act on. Berry is rare on purpose. Category colours belong to blocks, never to UI chrome. In code, always use semantic tokens (`bg-surface` , `text-fg-muted`). Palette steps are for illustration and the mark.

Block categories

Every block belongs to one of six categories. Its colour appears as a tag, a dot, the drag handle and the canvas outline while it's being placed. The six hues are generated at matching lightness and chroma in OKLCH, so none shouts over the others and every tag passes 7:1.

• action

ACTION

Blocks that do something: buttons, forms, sign-ups.

-  solid #DA5B79 / #F87F99
-  subtle #FFE8EB / #472028
-  fig #7D2E41 / #FEC7CF

• idea

IDEA

Words and messages: headlines, text, quotes.

-  solid #B08505 / #D6A20A
-  subtle #FCEDCD / #3C2B02
-  fig #624800 / #F3D392

• structure

STRUCTURE

Layout and data: sections, columns, pricing tables.

-  solid #408DEA / #6DADFF
-  subtle #E4F0FE / #182E4B
-  fig #1D4D87 / #BEDAFE

• growth

GROWTH

Reach and results: newsletter, analytics, SEO.

-  solid #6B9E1F / #8BBD50
-  subtle #E5F5D6 / #243411
-  fig #385805 / #C4E4A5

• flow

FLOW

Paths people follow: navigation, checkout, multi-step forms.

-  solid #D76821 / #F68A4F
-  subtle #FFEADF / #462311
-  fig #7B3606 / #FECBB1

Human touches: testimonials, team, social proof.

solid #AA6CD4 / #C88EF1

subtle #F5E9FF / #372544

fg #5F3979 / #E7CAFF

Contrast report

The build checks every pairing below in both themes and fails if one drops under its minimum:
4.5:1 for text, 3:1 for control boundaries, focus rings and dots.

FOREGROUND	BACKGROUND	MIN	LIGHT	DARK

A geometric voice, a precise workhorse.

Space Grotesk carries the personality in headings and the wordmark. Instrument Sans is sharper and more compact than Inter, so dense builder UI stays crisp. IBM Plex Mono marks anything structural: labels, tags, URLs and code.

DISPLAY • 600–700

Sizes marked fluid scale from a 400px viewport up to 1280px. Use sentence case everywhere.

Use tabular numbers in tables and counters. Keep running text under 66 characters wide.

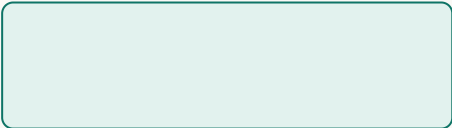

Space, radius, elevation, motion.

Everything sits on a 4px grid. In Tailwind, `--spacing` is 4px, so `p-4` is 16px. Corners get softer as objects get bigger.

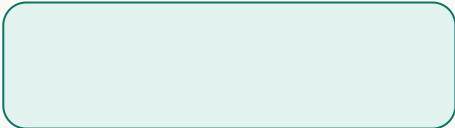

`rounded-2xs`

4px · Checkboxes, kbd

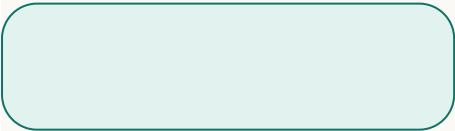

`rounded-xs`

6px · Menu items, tooltips

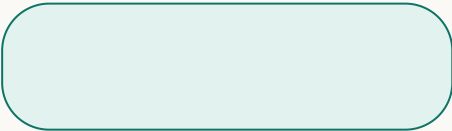

`rounded-sm`

12px · Buttons, inputs, selects, toasts

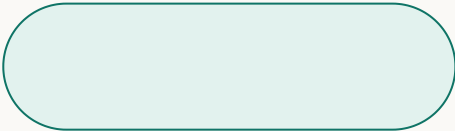

`rounded-md`

18px · Cards, blocks, popovers

`rounded-lg`

24px · Modals, sheets, large feature panels

`rounded-full`

pill · Tags, toggles, avatars

CONTROL	HEIGHT	USE
control-sm	28px	Toolbars, table rows, dense panels
control-md	34px	Default buttons and inputs
control-lg	42px	Marketing, onboarding, empty states

Most surfaces are flat and use a 1px line. Shadows are for things that float above the page. In dark mode, shadows get a faint light edge so they still read.

Elevation

shadow-xs

Buttons, inputs

shadow-sm

Selected block, raised card

shadow-md

Menus, popovers, dragged block

shadow-lg

Modals, command palette

Motion

Motion confirms what happened. It never performs. Most things take 120–180ms. `snap` is reserved for a block landing in place after a drag. With reduced motion on, every duration drops to 0.

standard · 180ms

enter · 280ms

exit · 120ms

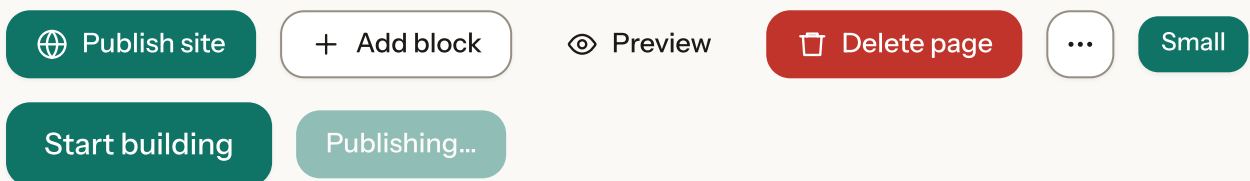

snap · 420ms

Built from the same small parts.

Each component shows its Tailwind v4 recipe, using the utilities from `tokens/tailwind.css`. Use the theme toggle at the top to check every one in both themes.

Buttons

One primary button per view. Labels are verbs that say exactly what happens: "Publish site", not "Submit". Secondary is the default for everything else. Ghost is for toolbars.

```
<button class="inline-flex h-[34px] items-center gap-2 rounded-sm bg-brand px-3.5 text-[13.5px] font-medium text-on-brand shadow-xs hover:bg-brand-hover">Publish site</button>
<button class="inline-flex h-[34px] items-center gap-2 rounded-sm border border-line-control bg-surface px-3.5 text-[13.5px] font-medium text-fg shadow-xs hover:bg-surface-hover">Add block</button>
```

Form fields

Labels always sit above the field. Hints explain the format before anyone gets it wrong. Errors replace the hint and say how to fix it.

```

Blocks on the canvas

A block is the product's core object. At rest it's a flat card. When selected it gets a 2px teal ring. While dragging it tilts slightly and gets `shadow-md`, and it lands with the `snap` easing. The drop target uses `brand-subtle` with a dashed teal line.

Auto-save drafts

Published. Live at mutia-ceramics.nolsatu.id

Plain, active, never precious.

Write from the maker's side of the screen. Talk about what they're doing, not how the system works underneath.

Name the action, then confirm it

An action keeps its name from click to confirmation: Publish → Publishing... → Published.

Errors say what to do next

What happened, then how to fix it. No apologies, no error codes up front, no "something went wrong".

Sentence case, short sentences

One idea per sentence. Buttons are two or three words. No exclamation marks in the UI.

Specific beats clever

Say "3 fields", "6 blocks", "under an hour". Real numbers and real names build trust faster than personality.

AVOID

USE

"Your webhook configuration has been submitted for processing."

"Saved. Your form now sends replies to your inbox."

"Error: operation failed unexpectedly."

"Couldn't publish. Check your domain settings and try again."

"Are you sure you want to proceed?"

"Delete 'About'? This removes the page and its 6 blocks."

"Successfully saved!"

"Saved."

"Invalid input."

"Use letters, numbers and hyphens only."

One source, fetchable from anywhere.

`tokens/tokens.json` (W3C Design Tokens format) is the source of truth. Every other file is generated from it by `npm run tokens`. All files under `/tokens` and `/assets` are served with open CORS, so tools, agents and other repos can fetch them directly.

`/tokens/tokens.json`

Source. DTCG format; dark values in `$extensions["id.nolsatu.mode"]`.

`/tokens/tokens.resolved.json`

Every token fully resolved, per mode, with its CSS variable and description.

`/tokens/tailwind.css`

Tailwind v4 theme: variables, `@theme`, dark variant, `type-*` utilities.

`/tokens/nolsatu.css`

Plain CSS variables (`--ns-*`) and `.ns-type-*` classes, no framework.

`/tokens/contrast.json`

WCAG contrast report for every semantic pairing.

`/DESIGN.md`

The whole system as Markdown, for people, AI agents and PR reviews.

`/nolsatu-design-system-v2.pdf`

This page as a PDF.

`/assets/logo/*.svg`

29 logo files; see

Logo files

Tailwind v4 in the builder app

```
/* apps/<app>/src/app.css – add "@nolsatu/design-system": "*" to the app's
dependencies */
@import "tailwindcss";
@import "@nolsatu/design-system/tailwind.css";
/* outside the monorepo: copy https://design.nolsatu.id/tokens/tailwind.css and
import that */
```

```
/* Now available: bg-canvas bg-surface text-fg text-fg-muted border-line border-line-control
  bg-brand hover:bg-brand-hover text-on-brand bg-cat-flow-subtle text-cat-flow-fg
  rounded-sm|md|lg shadow-xs..lg ease-standard|snap type-h1 type-body type-label */
```

Theme switching without a flash

Semantic colours follow the OS by default. To let people choose, set `data-theme` on `<html>` before the first paint. Tailwind's `dark:` variant follows the same attribute.

```
<script>
  try {
    const t = localStorage.getItem("ns-theme"); // "light" | "dark" | null (system)
    if (t) document.documentElement.dataset.theme = t;
  } catch {}
</script>
```

Naming

TOKENS.JSON PATH	CSS VARIABLE	TAILWIND
color.surface.subtle	--ns-color-surface-subtle	bg-surface-subtle
color.brand.default	--ns-color-brand	bg-brand text-brand
color.cat.flow.fg	--ns-color-cat-flow-fg	text-cat-flow-fg
typography.h2	--ns-text-h2-size ...	type-h2 or font-display text-h2
